**DETAILED ACTION**

***Allowable Subject Matter***

Claims 27-40 allowed.

The following is an examiner's statement of reasons for allowance: Claim 27 is allowable over the references of record because none of these references disclose or can be combined to yield the claimed invention of a magnetic field sensor having a first contact, a second contact, a third contact and a fourth contact arranged in this sequence along a straight line on a surface of a first well of a first conductivity type that is embedded in a substrate of a second conductivity type, said four contacts being two inner contacts and two outer contacts, a first of said two outer contacts and a first of said two inner contacts for supply and discharge of a current flowing through the first Hall element, wherein the first of said two outer contacts and the first of said two inner contacts are not adjacent contacts, and a second of said two outer contacts and a second of said two inner contacts for tapping a first Hall voltage, wherein the two inner contacts are the same width and wherein the two outer contacts are the same width, wherein a distance between the first contact and the second contact is equal to a distance between the third contact and the fourth contact, wherein a distance between the second contact and the third contact is selected such that approximately  $R_1 = R_2 = R_3$  wherein  $R_1$  denotes a resistance prevailing between the first contact and the second contact,  $R_2$  denotes a resistance prevailing between the second contact and the third contact and  $R_3$  denotes a resistance prevailing between the third contact and the fourth contact, and wherein the two outer contacts are connected via an additional

resistor having a resistance  $R_5$  that is selected such that approximately  $R_1 = R_2 = R_3 = R_4 || R_5$  wherein  $R_4$  denotes a resistance prevailing between the first contact and the fourth contact. Claims 28-38 depend either directly or indirectly on claim 27, such that these claims are allowable.

Claim 39 is allowable over the references of record because none of these references disclose or can be combined to yield the claimed invention of a magnetic field sensor having a first Hall element comprising a first contact, a second contact, a third contact and a fourth contact arranged in this sequence along a first straight line on a surface of a first well of a first conductivity type that is embedded in a substrate of a second conductivity type, said four contacts being two inner contacts and two outer contacts, a first of said two outer contacts and a first of said two inner contacts for supply and discharge of a current flowing through the first Hall element, wherein the first of said two outer contacts and the first of said two inner contacts are not adjacent contacts, and a second of said two outer contacts and a second of said two inner contacts for tapping a first Hall voltage, wherein the two inner contacts are the same width and wherein the two outer contacts are the same width, wherein a distance between the first contact and the second contact is equal to a distance between the third contact and the fourth contact, a second Hall element comprising a first contact, a second contact, a third contact and a fourth contact arranged in this sequence along a second straight line on a surface of a second well of the first conductivity type that is embedded in the substrate, said four contacts being two inner contacts and two outer contacts, a first of said two outer contacts and a first of said two inner contacts for

supply and discharge of a current flowing through the second Hall element, wherein the first of said two outer contacts and the first of said two inner contacts are not adjacent contacts, and a second of said two outer contacts and a second of said two inner contacts for tapping a second Hall voltage, wherein the two inner contacts are the same width and wherein the two outer contacts are the same width, wherein a distance between the first contact and the second contact is equal to a distance between the third contact and the fourth contact, wherein the first and second straight line run in parallel, and wherein either the first contact of the first Hall element is connected with the fourth contact of the second Hall element, the second contact of the first Hall element is connected with the first contact of the second Hall element, the third contact of the first Hall element is connected with the second contact of the second Hall element and the fourth contact of the first Hall element is connected with the third contact of the second Hall element or the first contact of the first Hall element is connected with the second contact of the second Hall element, the second contact of the first Hall element is connected with the third contact of the second Hall element, the third contact of the first Hall element is connected with the fourth contact of the second Hall element and the fourth contact of the first Hall element is connected with the first contact of the second Hall element. Claim 40 depend either directly or indirectly on claim 39, such that these claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
